

# Hi, my name is Chris Sutcliffe front-end Web Developer.

I create responsive websites that concentrate on the users' experience by providing intuitive navigation and a clear indication of the purpose and benefits of the site.

## projects.

### A Product Landing Page

Technologies used: **HTML, CSS**

### freeCodeCamp Project.

Requirements: Build a Product Landing Page that includes a form element that requires a valid email address as input, includes an embedded product video, uses at least one media query, and utilises CSS Flexbox at least once.

Method: I created a responsive design utilising CSS Flexbox as a flexible layout tool to distribute and align items in the menu, footer, about, and deals sections. I implemented a media query for correct display on smaller screens. The design is my own, as is the artwork, and it features my guitars.

### freeCodeCamp Project.

Requirements: Build a Technical Document that allows for navigation between document sections; the navbar must always be visible; the document must contain code examples together with explanations; and the document must contain at least one media query.

Method: I created a document based on my [GitHub Wiki Page](#) and used CSS positioning to provide an 'always available' navigation pane. I also added a media query to allow for smooth scrolling.

### A Technical Document

Technologies used: **HTML, CSS**

### A Tribute Page

Technologies used: **HTML, CSS**

### freeCodeCamp Project.

Requirements: Build a Tribute Page with at least one image that includes an image caption and resizes responsively. Provide an external link that opens in a new tab for additional information on the subject.

Method: I used a combination of HTML span and list elements together with CSS Flexbox to create a responsive layout and a uniform discography design.

### about.

I am a developer who is an ex-pat from the UK with a love of learning and creating things combined with the self-discipline to be task- and customer-focused which I attribute to my years of military service.

I like learning new things and solving challenges, and my enthusiasm only grows the more I learn.

Technologies I have learned so far on my web development path:
